ABSTRACT OF THE DISCLOSURE

An internet-based system for transferring dynamic information from a service provider to an entity includes an icon at the entity's workstation for directing the entity to a communicator at the web site of the service provider. Further, the communicator directs the entity to interconnected modules at the web site of the service provider where categorized aspects of the dynamic information are respectively presented for collective use by individual modules. Specifically, this information concerns the performance status of specific tasks necessary for the completion of a defined project for the particular entity.
